Table supplement 2: Variables included in the different models to explore the relationship between driving offences (any offence, reckless driving, speeding, low speeding and others) during 2003/04-2006 and crash (any crash, crash resulting in hospital admission or death and single vehicle crash) during 2007-2016.

Model	Variables included
M1*	age, sex, socioeconomic status of area of residence (SEIFA index), remoteness of area of residence and average driving per week
M2*	age, sex, socioeconomic status of area of residence (SEIFA index), remoteness of area of residence average driving per week, cannabis smoking, alcohol consumption, drug use and self-harm
M3*	age, sex, socioeconomic status of area of residence (SEIFA index), remoteness of area of residence, average driving per week, risk perception score, risky driving score and sensation seeking score.
M4*	age, sex, socioeconomic status of area of residence (SEIFA index), remoteness of area of residence, average driving per week, self-rated driving ability, number of attempts on driver test, crash before start of follow up not related to driving offence, lessons with professional driving instructor and time on learner licence.
M5*	age, sex, socioeconomic status of area of residence (SEIFA index), remoteness of area of residence, average driving per week, cannabis smoking, alcohol consumption, drug use and self-harm, risk perception score, risky driving score, sensation seeking score, self-rated driving ability, number of attempts on driver test, crash before start of follow up not related to driving offence, lessons with professional driving instructor and time on learner licence
